EDUCATION

Bina Nusantara (BINUS) University

Computer Science Undergraduate

- Current GPA: 3.97 / 4.00
- Relevant Coursework: Intelligent Systems, Data Structures & Algorithms, Software Engineering

Alam Sutera, Indonesia

Aug. 2024 – Present

Santa Laurensia High School

High School Diploma

Alam Sutera, Indonesia

July 2021 – May 2024

EXPERIENCE

C Programming Praetorian (Course Instructor)

Bina Nusantara Computer Club (BNCC)

- Delivered a 13-session C programming curriculum for the BNCC Learning and Training program.
- Evaluated Final Projects focused on algorithm efficiency, memory usage, and readability.
- Maintained classroom engagement and student performance metrics aligned with organizational KPI benchmarks.

Sep. 2025 – Feb. 2026

Jakarta, Indonesia

UI/UX Designer & Frontend Prototyper

ElevAlte Hackathon 2025

- Designed high-fidelity interactive prototypes in Figma for an AI product concept.
- Architected intuitive user flows to optimize core interaction patterns.
- Collaborated closely with frontend developers to ensure design system compatibility during implementation.

May 2025 – June 2025

Jakarta, Indonesia

Solution Designer – Team KYGE

Samsung Innovation Campus (Batch 6)

- Completed coursework in IoT application design and Generative AI integration frameworks.
- Contributed to solution ideation, user flow design, and system architecture for a smart monitoring application.
- Refined pitch decks and delivered final presentations, advancing to Stage 4 (Top 320 out of 10,000+ candidates).

Jan. 2025 – May 2025

Jakarta, Indonesia

PROJECTS

Collabra | FastAPI, PostgreSQL, JavaScript, Docker, Render

- Built secure backend APIs with user login, password protection, and role-based access control.
- Connected a vanilla JavaScript dashboard to a PostgreSQL database for real-time data updates.
- Package the web application using Docker containers and deployed live on Render.

2026

BankGuard | Python, Flask, Scikit-Learn, Pandas, MongoDB, Vercel

- Created a mobile banking fraud detection system that analyzes transaction patterns.
- Trained a Random Forest model on 1.67M+ records, detecting ~97.3% of fraudulent transactions.
- Developed a Flask REST API connected to MongoDB and deployed live on Vercel.

2026

SeeFlood | Python, PyTorch, EfficientNet-B0, Scikit-Learn

- Trained an image recognition model to automatically categorize flood levels into 4 severity stages.
- Applied image processing and custom training logic to improve model accuracy on real-world photo sets.
- Evaluated model performance using error metrics to ensure reliable early-warning classifications.

2025

TECHNICAL SKILLS

Spoken Languages: Bahasa Indonesia, English

Programming Languages: C/C++, Python, SQL, JavaScript

Frameworks & Libraries: PyTorch, Torchvision, Scikit-Learn, OpenCV, Pandas, NumPy, Matplotlib, Flask, FastAPI, React, Node.js, HTML/CSS, Tailwind CSS

Developer Tools & Infrastructure: Git, GitHub, Docker, PostgreSQL, MongoDB, OAuth2/JWT, Render, Vercel, Figma, VS Code, Visual Studio
