EDUCATION

Bina Nusantara (BINUS) University <i>Computer Science Undergraduate</i> - Current GPA: 3.97 / 4.00 - Relevant Coursework: Intelligent Systems, Data Structures & Algorithms, Computer Vision, Software Engineering	Alam Sutera, Indonesia <i>Aug. 2024 – Present</i>
Santa Laurensia High School <i>High School Diploma</i>	Alam Sutera, Indonesia <i>July 2021 – May 2024</i>

EXPERIENCE

C Programming Praetorian (Course Instructor) <i>Bina Nusantara Computer Club (BNCC)</i> - Delivered a 13-session C programming curriculum for the BNCC Learning and Training program. - Evaluated Final Projects, conducting code reviews focused on algorithm efficiency, memory usage, and readability. - Maintained classroom engagement and performance metrics aligned with organizational KPI benchmarks.	Sep. 2025 – Feb. 2026 <i>Jakarta, Indonesia</i>
UI/UX Designer & Frontend Prototyper <i>ElevAlte Hackathon 2025</i> - Designed high-fidelity interactive prototypes and design systems in Figma for an AI product concept. - Architected user flows, form validation states, and component specs to optimize interaction patterns. - Collaborated with frontend developers to ensure design system compatibility during prototype implementation.	May 2025 – June 2025 <i>Jakarta, Indonesia</i>
Solution Designer – Team KYGE <i>Samsung Innovation Campus (Batch 6)</i> - Completed specialized coursework in IoT application design and Generative AI integration frameworks. - Contributed to solution ideation, user flow design, and architecture specs for a smart monitoring application. - Refined pitch decks and delivered final presentations, advancing to Stage 4 (Top 320 out of 10,000+ candidates).	Jan. 2025 – May 2025 <i>Jakarta, Indonesia</i>

PROJECTS

Collabra <i>FastAPI, SQLAlchemy, JavaScript, OAuth2/JWT, PostgreSQL, Docker, Render</i> - Architected RESTful backend APIs for a project management platform supporting tasks, comments, and file attachments. - Implemented RBAC authorization, password hashing, and JWT authentication for secure multi-role access. - Engineered frontend-backend integration with vanilla JavaScript, enabling live database sync for user dashboards. - Containerized application services using Docker and deployed production environments on Render.	2026
BankGuard <i>Python, Flask, Scikit-Learn, Pandas, MongoDB, Vercel</i> - Built an end-to-end mobile banking fraud detection prototype featuring real-time risk scoring workflows. - Engineered inference pipelines with rolling transaction statistics and balance shift features on 1.67M+ rows. - Trained threshold-tuned Random Forest models achieving 97.3% fraud recall on imbalanced evaluation sets. - Integrated Flask REST API endpoints with MongoDB persistence and deployed serverless workflows on Vercel.	2026
SeeFlood <i>Python, PyTorch, Torchvision, EfficientNet-B0, Scikit-Learn, NumPy</i> - Engineered a 4-class flood severity classification pipeline (no flood, light, moderate, severe) using computer vision. - Designed image augmentation and ordinal regression loss formulations to capture continuous flood progression. - Fine-tuned ImageNet-pretrained EfficientNet-B0 architectures while optimizing validation loss and generalization. - Evaluated classification performance using Mean Absolute Error (MAE) and confusion matrices for early-warning systems.	2025

TECHNICAL SKILLS

Spoken Languages: Bahasa Indonesia, English
Programming Languages: C/C++, Python, SQL, JavaScript
Frameworks & Libraries: PyTorch, Torchvision, Scikit-Learn, OpenCV, Pandas, NumPy, Matplotlib, Flask, FastAPI, React, Node.js, HTML/CSS, Tailwind CSS
Developer Tools & Infrastructure: Git, GitHub, Docker, PostgreSQL, MongoDB, OAuth2/JWT, Render, Vercel, Figma, VS Code, Visual Studio
