EDUCATION

Bina Nusantara (BINUS) University <i>Computer Science Undergraduate</i> - Current GPA: 3.97 / 4.00 - Relevant Coursework: Intelligent Systems, Data Structures & Algorithms, Software Engineering	Alam Sutera, Indonesia <i>Aug. 2024 – Present</i>
---	--

EXPERIENCE

C Programming Praetorian (Course Instructor) <i>Bina Nusantara Computer Club (BNCC)</i> - Delivered a 13-session C programming curriculum for the BNCC Learning and Training program. - Evaluated Final Projects focused on algorithm efficiency, memory usage, and readability. - Maintained classroom engagement and student performance metrics aligned with organizational KPI benchmarks.	Sep. 2025 – Feb. 2026 <i>Jakarta, Indonesia</i>
UI/UX Designer & Frontend Prototyper <i>ElevAlte Hackathon 2025</i> - Designed high-fidelity interactive prototypes in Figma for an AI product concept. - Architected intuitive user flows to optimize core interaction patterns. - Collaborated closely with frontend developers to ensure design system compatibility during implementation.	May 2025 – June 2025 <i>Jakarta, Indonesia</i>
Solution Designer – Team KYGE <i>Samsung Innovation Campus (Batch 6)</i> - Completed coursework in IoT application design and Generative AI integration frameworks. - Contributed to solution ideation, user flow design, and system architecture for a smart monitoring application. - Refined pitch decks and delivered final presentations, advancing to Stage 4 (Top 320 out of 10,000+ candidates).	Jan. 2025 – May 2025 <i>Jakarta, Indonesia</i>

PROJECTS

BankGuard – Fraud Detection <i>Python, Flask, Scikit-Learn, Pandas, MongoDB, Vercel</i> - Engineered end-to-end mobile banking fraud detection system analyzing transaction patterns and financial risk. - Executed data preprocessing, feature engineering (rolling windows, balance shifts), and Flask REST API integration on 1.67M+ records. - Trained threshold-tuned Random Forest models achieving 97.3% fraud recall on imbalanced evaluation sets and deployed production workflows on Vercel.	2026
SeeFlood – Flood Severity Classifier <i>Python, PyTorch, EfficientNet-B0, Scikit-Learn</i> - Built computer vision classifier leveraging transfer learning to categorize flood images into 4 distinct severity levels using 1,326 curated images. - Evaluated multi-class performance using precision, recall, and confusion matrices to ensure reliable predictions. - Achieved 88% accuracy on a 135-image test set through custom image preprocessing and trained logic implementation.	2025
Collabra – Project Management App <i>FastAPI, PostgreSQL, JavaScript, Docker, Render</i> - Built secure backend APIs with user login, password protection, and role-based access control. - Connected a vanilla JavaScript dashboard to a PostgreSQL database for real-time data updates. - Package the web application using Docker containers and deployed live on Render.	2026

TECHNICAL SKILLS

Programming Languages: Python, C/C++, SQL, JavaScript
AI & Machine Learning: PyTorch, Scikit-Learn, OpenCV, NLP, Computer Vision, Transfer Learning
Data Engineering & Analytics: Pandas, NumPy, Data Preprocessing, Feature Engineering, TF-IDF Pipeline, Matplotlib
Backend, Web & Cloud Deployment: FastAPI, Flask, REST APIs, PostgreSQL, MongoDB, Docker, Vercel, Render
Developer Tools & Methodologies: Git, GitHub, VS Code, Visual Studio, OAuth2/JWT, Figma
Languages: Bahasa Indonesia (Native), English (Professional)
